

NEW PRESENTATION

CareSense® Bed Exit Control System

The most exclusive
and simplest way
of bed stand-up monitoring
with care mode and
radio call transmission

Simplest positioning at the bedside

OUR NEW DEVELOPMENT

The CareSens® Bed Exit Control combines the advantages of the sensor mat and the motion detector in one product.

YOUR ADVANTAGES

- » intuitive set-up and operation
- » no tipping hazard in front of the bed thanks to flat housing
- » care mode via foot control
- » long battery operation time (approx. 2 Years)
- » simple and tool-free battery change
- » non-slip and non-slip housing

CareSense®

Bed Exit Control System

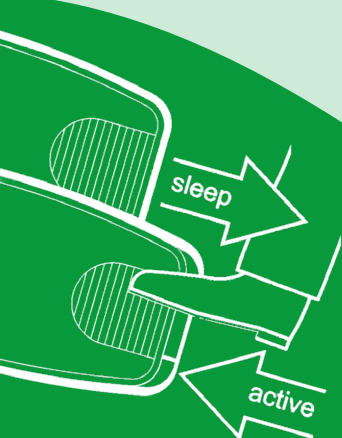

For some people or patients getting out of bed or out of the room harbours unforeseeable dangers and risks. The CareSens reliably recognises such movements and notifies the care staff immediately.

During the development of the CareSens, particular emphasis was placed on simple and intuitive set-up and operation. This means that commissioning takes just a few seconds and the application daily use also works without time-consuming training of staff. For the transmission of the message to the nurse call system it is sufficient to connect the appropriate

radio receiver to both the nurse call system and the CareSens.

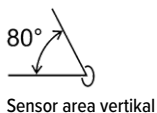

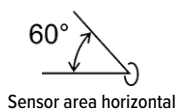

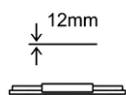

With the CareSens more safety and efficiency in your care facility or hospital.

Rely on the innovative bed stand-up monitoring system, which is easy to use and always works reliably at all times.

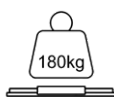

Simple activation and deactivation by foot control, e.g. for care purposes.

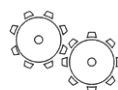

SIMPLE RELIABLE

integrated care mode

durable

intuitive setup and operation
